

Update after the last meeting with ZM 2018-03-14

- ❖ More information about the Forum page will come from ZM so that WF knows exactly; what purpose does it have, what functions should be added? etc.
- ❖ The word "Music" that was placed in the middle of the keyhole on the "Coming Soon 2" page - is not to be there, the design is redone in Wix by SH & will now be completed by WF
- ❖ ZM are informed about the encountered challenge when it came to making the keyhole on the "Coming Soon" pages responsive in all devices and that a solution was found; that in a computer mouse pointer can switch images but in a mobile an automatic scroll is added
- ❖ "Coming soon" - the pages are made, the e-mail works + everything is stored in the database and is available/visible in the WP Admin
- ❖ Database design II is made and available in Google (Doc 205-01 - ZM Database Design 2)
- ❖ WF will share all pages with ZM via links from both the WP pages (**soon**) and the PHP pages. **WF will get back to ZM about how to share the development of the apps**
- ❖ Pages created in WordPress:
  - ✓ Homepage-1
  - ✓ Coming Soon Page-1
  - ✓ Terms & Conditions page
  - ✓ ZezaMee FAQ's
  - ✓ About page
  - ✓ Login
  - ✓ Contact Us Page
  - ✓ Blog
  - ✓ Homepage-2 (WF design)
  - ✓ Forum
- ❖ Pages to create in PHP code (Digital Ocean Platform):
  - ✓ Sign Mee Up
  - ✓ Open Mee
  - ✓ This is Mee
  - ✓ C&mmunity
  - ✓ Artists/Bands
  - ✓ Listen to Music/Lyrics
  - ✓ Setlists
  - ✓ Mee Plan
  - ✓ My Booked flights
  - ✓ My Booked Hotels
  - ✓ My Booked Concerts/Festivals
  - ✓ My Booked City Sites
  - ✓ Book Concert Tickets
  - ✓ Book Hotels
  - ✓ Book Flight Tickets
  - ✓ The Music Magazine
- ❖ Regarding ZM's ability to make changes in text and image in the future and education;  
In WordPress, edits are made directly to the pages in text/image/respective fields  
In PHP changes are made in the PHP file
- ❖ **WF will get back to ZM regarding their education and with more information on how exactly future edits on the website are to be done**

- ❖ WF develops the pages as in Wix but during the project, **WF will come up with tips/suggestions for possible changes/improvements/other solutions + what they would mean timewise for the project**
- ❖ Regarding the "Open Mee" page and the function to be able to select public/private where public will be shown on "This is Mee" page; WF needs more information on how this will work to add needed features and create a UX (for example, if Anna uploads an image in Open Mee as Public, it appears on This is Mee and may also appear under "Latest uploads from members" on Home page. If Anna uploads an image as Private, it only appears in Open Mee - how about Annas friends here, should they be able to see this? ZM will return to WF with more info regarding this)
- ❖ The pages built in PHP require a large admin that manages the PHP pages/system, this is a big job and has begun, but will take time (included in the project plan)
- ❖ The question about how members will enter/choose Gender will be discussed further, for now now WF can add Female/Male/Other
- ❖ More photos will come when ZM have selected them, **WF need to inform them of: how many pixels in height/width, what size in Mb and what format (jpeg/png) images should be and how to share them (dropbox?)**
- ❖ Easter/Easter break is coming up soon  
(it is planned for in the current project plan = no time changes from WF side)
- ❖ Absence: SC is away 30/4-4/5 (not available)
- ❖ Absence: SH is away on Easter break (available) + away 12-15/4 (not available)
- ❖ Because countries will be registered in the database via IP address/API when someone registers via email; no scrolling is required, with countries to choose, to be entered in the form to register (important for ZM to know what country their members are coming/registering from)
- ❖ This is Mee page - where one fills in "favorite artist/band" = drop-down list alt. autofill must be added here to avoid misspellings and possible problems in the database
- ❖ This is Mee page - all red headlines in Wix = buttons = click there, the member will fill in (= function to fill in added there)
- ❖ This is Mee page - "top favorite bands" + "top 5 concerts" = member fills in themselves (= function for it added there)
- ❖ Home page - "latest uploads from members" section = if a member has chosen private - i.e. for an image – this may obviously not appear in that feed!
- ❖ Cookies - pop-up will appear on the website with info about cookies, will appear immediately and must be accepted, ZM will return with info about design/text on this
- ❖ Fredrik has now received the DUNS number, ZM will get back to WF when everything is done there
- ❖ Regarding adding advertisement/ads in a good way on the C&mmunity page = **WF need to present ideas on how/give suggestions for solutions on this**
- ❖ Listen to the music/lyrics page - as soon as you select a song in Spotify list (right), the text will pop up (left) - will be linked to AZ lyrics (ZM will get back to WF if something else is going to be used) & the video of that song on YouTube appears below. When you click on a song in the Spotify list, ZM does not want members to be redirected from ZM site in a new window + not, as now, see information about getting the Spotify app (if it is possible to change/not depend on a setting at Spotify?)
- ❖ ZM will get back to WF with the exact date for the launch of the Coming soon pages
- ❖ **WF needs to create a plan for all the functions on all the pages, a UX**
